Every person produces about 650 tons of garbage during his/her lifetime.

Some scientists say that one species of plant, animal or insect becomes extinct every day. In the next 20 years, one-fifth of all species could become extinct.

Forests cover 30% of the Earth's land. They produce oxygen. Protecting all the forests is the key to our survival.

We are running out of space in which we can get rid of garbage. One solution to this problem is recycling.

Eight million tons of oil are spilled into the Earth's oceans every year.

Glass produced from recycled glass reduces related air pollution by 20% and water pollution by 50%.

Oceans cover more than 70% of the Earth's surface. Life began in the oceans. Today, coastal waters have become very polluted, and whales and dolphins are killed in

One ton of recycled paper can save 17 trees.

The central illustration shows a group of people, including children and adults, gathered around a large open book, appearing to be reading or studying together. The background of the collage features various small images related to environmental themes, such as a forest, a city, a beach, and a recycling symbol.
